Rigged trolling flies are leadered with 50lb. Ande monofilament, 36 inches long. Slide fly onto mono and tie a loop at a recommended length of 17 to 24 inches from head of fly to attractor. Snelled with VMC vanadium cone cut hooks.

Trolling speeds should vary from 2 to 3 M.P.H. However, a very fast speed of over 3 M.P. H. has been successful on the Great Lakes for King Salmon in all stages of life cycles.
